LORENTZ S1-200 pump system

Description

The **LORENTZ S1-200** pump system is a portable and flexible system designed to pump water using solar power.

The system has an all plugged design for simple customer self installation. All equipment is rated for outdoor use. The system consists of a submersible helical rotor pump attached to a high efficiency brushless ECDRIVE motor. The system controller digitally controls the motor and monitors the system operation. Inputs are provided for connection of accessories for system automation (dry run protection and tank full sensor).

Features

- High-efficiency ECDRIVE DC brushless motor and high efficiency helical rotor
- System controller with plugged connections, integrated MPPT
- Controller with Bluetooth® connectivity for local configuration and control
- Simple S-Connect app for speed control, timers and extended trouble shooting
